

Zenki Chair

Zenki Chair

Zenki chair is a new concept in ergonomic seating. The unique chair action is gravity driven and provides the user with a brand new sitting experience - especially good when used in conjunction with the Zenki workstation.

Operation is simple and intuitive. In addition to the usual seat height and seat slide controls, the chair features just two simple on/off controls that operate the seat and back movement. These move independently and according to the users centre of gravity ensuring a good posture whatever the work Activity. A memory foam seat with built in coccyx zone ensures maximum sitting comfort for all users.

Two models are offered:-

The high back version is fitted as standard with a large seat (W510 x D470) [see website for full spec: www.zenkipod.com]

The medium back is fitted as standard with a small seat (W480 x D440) [see website for full spec: www.zenkipod.com]

The seats can be interchanged however to achieve the best fit, plus there are optional extras of 4 way adjustable arms, a headrest and a polished aluminium base.

A new standard feature of the arms is the ability to reduce or increase the usable seat width (between the arms) according to each individual users requirement from a minimum 370mm to a maximum of 580mm.

A simple 5 digit code enables you to build your required specification as follows:

How To Order

Example opposite shows the order code for a Zenki Medium Back Chair with Small seat, 4 way Adjustable Arms, Articulated Head Rest and Standard Black Base.

Use the following codes to help build your perfect chair:

BOX1	Chair:	ZCH = High Back Chair ZCM = Medium Back Chair
BOX2	Seat	1 = Small Seat W 480 x D440 (+60mm Seat Slide) 2 = Large Seat W510 x D470 (+60mm Seat Slide)
BOX3	Arms	0 = No Arms A = 4 Way Adjustable Arms
BOX4	Headrest	0 = No Headrest H = Articulated Headrest
BOX5	Chair Base	0 = Standard Black Base P = Polished Aluminium Base
