

Cover materials

Microfibre: Dust and loose dirt can be brushed off easily or vacuum cleaned. You can also clean the seat with a damp cloth, let it dry and then loosen up the surface with a soft brush. Stain removal: always removes stains immediately. Avoid marks by cleaning from the edge of the seat to the middle. Allow to dry completely and then loosen up the surface with a soft brush.

Imitation leather: It is important to clean the imitation leather regularly. Clean the seat using lukewarm soapy water and a smooth, lint-free cloth or soft brush. Use alcohol-based disinfectants. Do not use strong detergents based on chlorine, salt, acid or hydrogen peroxide and do not use abrasive detergents.

Column

The spring strut is powder-coated and is best cleaned with a soft cloth and mild detergent or benzene. **The telescopic part of the gas spring is greased and should not be cleaned.**

Base

Dark marks left by the soles of shoes on the base are best removed using a soft India rubber or a soft cloth with a drop of benzene. Contact with metal heels and the like should always be avoided.
